responsible people

TEAM GUIDE

Kanban Board / Dashboard / Storage

What does our application do?

It gives a team one place to organize tasks, move work through a three-stage workflow, and review progress from live data.

IN PLAIN ENGLISH

It gives a team one place to organize tasks, move work through a three-stage workflow, and review progress from live data.

What the team should know

01 Kanban Board: TO DO, DOING, DONE

02 Dashboard: five metrics and three charts

03 Required: CRUD, assignment, dates, persistence

PRESENTATION ANSWER

Product areas and required behavior

How does task data move?

A single shared context keeps the Board and Dashboard synchronized.

IN PLAIN ENGLISH

A single shared context keeps the Board and Dashboard synchronized.

What the team should know

01 Local Storage reads saved data

02 Hydration repairs and normalizes fields

03 TaskContext shares state with pages

04 Calculations create metrics and charts

PRESENTATION ANSWER

main.jsx -> App.jsx -> pages -> context -> utilities

Lazy-loaded Dashboard

The Dashboard bundle is requested when its route is opened.

IN PLAIN ENGLISH

The Dashboard bundle is requested when its route is opened.

What the team should know

01 Optional performance feature

02 React lazy loads DashboardPage

03 Suspense displays a loading fallback

04 The /dashboard route stays unchanged

PRESENTATION ANSWER

Keep it when the team can explain code splitting; simplify it when the smallest codebase matters.

Keyboard focus management

Because React changes screens without a full document refresh, focus is deliberately returned to meaningful content.

IN PLAIN ENGLISH

Because React changes screens without a full document refresh, focus is deliberately returned to meaningful content.

What the team should know

01 Route focus: App.jsx focuses the new H1

02 MutationObserver waits for lazy content

03 Task movement returns focus to the moved card

04 Live regions announce status changes

PRESENTATION ANSWER

`requestAnimationFrame / MutationObserver / tabIndex="-1"`

Accessible task editing

The create and edit form behaves like a keyboard-friendly dialog.

IN PLAIN ENGLISH

The create and edit form behaves like a keyboard-friendly dialog.

What the team should know

01 Initial title focus

02 Escape closes the dialog

03 Tab and Shift+Tab wrap inside it

04 Invalid fields receive focus

05 Focus returns to the opener

PRESENTATION ANSWER

Test: open task, press Shift+Tab, submit invalid data, press Escape.

Defensive Local Storage validation

Browser storage can be missing, old, malformed, or manually edited. The app repairs data before trusting it.

IN PLAIN ENGLISH

Browser storage can be missing, old, malformed, or manually edited. The app repairs data before trusting it.

What the team should know

01 storage.js safely reads and writes JSON

02 taskHydration.js sanitizes IDs, dates, fields, and status

03 Invalid arrays use fallback data

04 Completion dates stay consistent with DONE

PRESENTATION ANSWER

Keep safe parsing and valid-array checks; they protect required persistence.

Required behavior to explain

The visual interface is backed by small, testable rules.

IN PLAIN ENGLISH

The visual interface is backed by small, testable rules.

What the team should know

01 Entering DONE records today as completeDate

02 Leaving DONE clears completeDate

03 Overdue means due date passed and status is not DONE

04 Dashboard derives all values from current tasks

PRESENTATION ANSWER

Lihout Van / Ye Htet Aung / Zaw Zaw Naing

Responsive custom CSS

The stylesheet provides the visual system and responsive behavior for both pages.

IN PLAIN ENGLISH

The stylesheet provides the visual system and responsive behavior for both pages.

What the team should know

01 Shared variables, Grid, and Flexbox

02 Visible focus rings and readable contrast

03 Desktop, tablet, and mobile breakpoints

04 Reduced-motion support and responsive board scrolling

PRESENTATION ANSWER

npm test / npm run lint / npm run build / npm run dev

Can we present the project confidently?

Every member should demonstrate the workflow and explain the data flow in their own words.

IN PLAIN ENGLISH

Every member should demonstrate the workflow and explain the data flow in their own words.

What the team should know

01 Trace Local Storage to TaskContext, pages, cards, and charts

02 Create, edit, delete, assign, search, filter, and move a task

03 Add a category, refresh, and confirm it remains

04 Explain one optional feature and one required behavior

PRESENTATION ANSWER

Trace the flow. Test together. Present honestly.
